

Building Bridges in Hybrid Teaching and Learning Settings

Monday 4 November 2024 17:00 (1h 30m)

In the ‚Lernraum Bauhaus‘ project, we are working on solutions to organise teaching and learning in hybrid learning environments from the perspective of both teachers and learners.

the workshop will present various tools and approaches that we have tested and that act as bridges between different spaces or spatial concepts. We want to show possibilities and limitations and openly share our experiences. Our fundamental aim is to establish connections between very different uses and requirements of space and to break down barriers to the use of hybrid teaching and learning settings.
